

GET A NEW KICK WITH ESLA SCOOTERS

MODEL 4100 →
HYBRID HANDLEBAR

MODEL 4102 AND 4103 →
STRAIGHT HANDLEBAR

TIME SAVER

Equipped with excellent balance and control properties, the ESLA scooter is agile indoors but rolls smoothly also outdoors, thanks to its large rubber wheels.

The ESLA scooter allows you to move faster in your free time and in large industrial halls, warehouses and plants, saving you valuable time and making your day more efficient.

The automatic parking assist is activated when the handlebar is turned to the extreme position and released when the handlebar is returned to the riding position. The basket's capacity is up to 20 kg, and the scooter does not fall over even when carrying a heavy load.

MODEL 4100 FREE TIME

A sturdy steel-frame scooter is ideal for an urban environment and regular exercise. A scooter helps you both move quickly and get fit. Scootering strengthens the muscles, especially the muscles in the lower back, buttocks and back of the thigh.

The padded hybrid handlebar enables three basic riding positions. The front and back frame of the scooter can be separated for easy transport in a small space.

MODEL 4102 AND 4103 INDUSTRIAL USE

A sturdy steel-frame ESLA scooter gets you from one place to another quick and safe. The large wheels make the scooter light. The front wheel's drum brake stops the scooter effectively, if necessary.

The ESLA Scooter 4102 with pneumatic wheels and ESLA Scooter 4103 with solid wheels are popular in professional use. They help you move faster in long corridors and large halls. The scooters can also be used for recreational activities. A basket is an optional accessory.
